Fiber Internet Self-Installation Guide

SETTING UP IS SIMPLE. LET'S GET YOU CONNECTED.

What's in the Box?

- A Fiber Patch Cord
- B Power Strip
- C ONT and Power Adapter Cord
- D Router and Power Adapter Cord
- E Ethernet Cable

Getting Set Up

1. Identifying Your Equipment

Open your Fiber Internet Self-Installation Package and identify each item according to the color-coded labels.

2. Locating the Fiber Wallplate

Its location may vary, but is typically found indoors affixed on the inside of an exterior wall, in a closet or media panel. This is where the Fiber Internet signal enters your home.

If the Fiber Wallplate doesn't have a A Fiber Patch Cord emerging from it, use the one provided in the Self-Installation Package.

Gently take the cap off one of the green ends of the Fiber Patch Cord. Open the Fiber Wallplate and plug the green end of the Fiber Patch Cord into the green port/opening within the Fiber Wallplate. Don't touch or look directly into the end of the cord as the light emanating from this cord could damage your eyes.

If the Fiber Wallplate already has a A Fiber Patch Cord coming from it, you won't need the one provided.

3. Connecting Your Equipment

B Power Strip

Plug the Power Strip into a nearby electrical outlet.

C ONT

Locate the ONT near the Fiber Wallplate and ensure the other green end of the Fiber Patch Cord is plugged into the green port/opening on the side of the ONT. Ensure that the ONT's Power Adapter is connected to the ONT and plug it into the Power Strip. The 'Power', 'Broadband' and 'Service' indicators on the ONT should light up green after 2-3 minutes.

D Router

Connect the Router's Power Adaptor to the Router and then plug it into the Power Strip.

E Ethernet Cable

Plug one end of the Ethernet Cable into the port labeled 'Ethernet' on the ONT. Then, plug the other end of the Ethernet Cable into the Router port that has a globe icon above it. After ~10 minutes you'll see a solid blue light on the Router and a green light for 'Ethernet' on the ONT.

4. Setting Up Your Wi-Fi

Your Clearwave Router comes with the Clearwave Wi-Fi App so you can conveniently manage your home Wi-Fi network. Learn more & get the app at clearwavefiber.com/App.

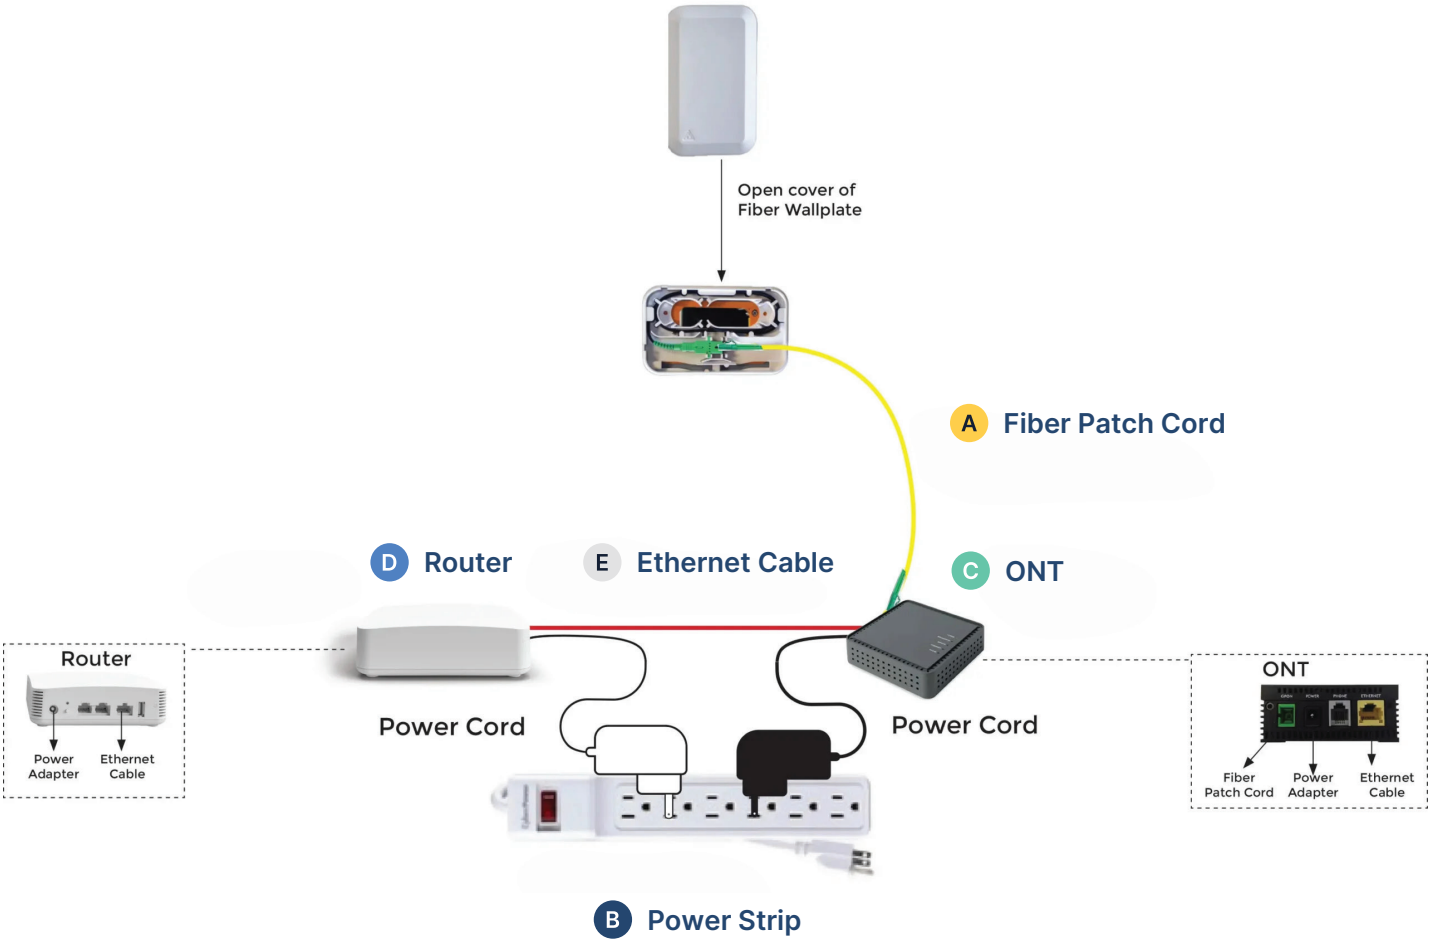

All set! Enjoy Fiber Internet built for you.
